

**TESTIMONY OF MISSOURI RIGHT TO LIFE  
IN OPPOSITION TO SB 813**

On behalf of Missouri Right to Life, I submit the following testimony in opposition to SB 813.

It is the mission of Missouri Right to Life (MRL) to protect every innocent human life at every stage of development. It is the threat to embryonic human life that brings us here to testify today.

While Missouri Right to Life is not averse to economic development and ethical research, when that development is built on the destruction of innocent human life at the embryonic stage, MRL will speak up.

SB 813 has the same concerns regarding open-ended scientific research and biomedical research with no protective language to prevent human embryonic stem cell research that we have voiced in previous years. The pharmaceutical and biomedical industries have engaged in unethical medical research, including the killing of embryos and fetuses so our concerns are real. Vaccines already exist that were developed from cells of aborted babies.

Setting up another commission to approve funding of or tax credits for life science projects without any restrictions is a serious concern of Missouri Right to Life. There have been complaints voiced in the media, by those who would profit from human cloning and the destruction of innocent human beings through embryonic stem cell research, that cloning researchers won't come to Missouri because the environment is unfriendly to human cloning. We are confident that restrictions are necessary in today's climate for pharmaceutical, scientific and biomedical research companies especially when we are talking about the use of any money that is given to the state to be disbursed through a state agency. Any monies being disbursed through a state agency become public (state or federal) moneys and the state should not be a party to providing funds for life destroying research.

Missouri Right to Life recommends the following language to assure that innocent human beings are not the victims of unethical research:

“Any funds granted by the Department of Economic Development, or any commission created for this task, to increase the amount of appropriation from the economic development supplemental tax increment financing fund shall be used exclusively on projects in the fields of animal science, plant science, medical devices, diagnostics, clinical imaging, or information technology related to human health and provided that no public funds shall be expended, paid, or granted to or on behalf of an existing or proposed research project that involves abortion services, human cloning, or prohibited human research as defined in RSMo 196.1127.”

Until the anti-life issues of SB 813 are addressed, Missouri Right to Life must take a position in opposition to SB 813.
